What do you like best about this course?

These comments are intended for all instructors.

Comments
What I like best about this course is the examples provided after each concept we learn, as they help make the material clearer and easier to apply. I also enjoy the groupwork we do at the end of each lesson on Wednesdays and sometimes Mondays, since it allows us to collaborate and reinforce our understanding. In addition, I appreciate the lesson summaries at the end of each class because they help review and highlight the key ideas.
Learning math, but with word problems.

If you were teaching this course, what would you do differently?

Comments
If I were teaching this course, I would add more step–by–step explanations for challenging problems to ensure students fully understand the process. I would also increase opportunities for groupwork and class discussion, since working together helps reinforce learning. In addition, I would include more varied practice problems to build confidence with different types of questions. I would keep the end–of–lesson summaries, but I might also add short review activities or quick quizzes to help reinforce the main concepts.
Nothing new.

In what ways, if any, has this course or the instructor Aj Bu encouraged your intellectual growth and progress?

These comments are unique to the instructor Aj Bu.

Comments
This course and my instructor, have supported my intellectual growth by helping me develop a stronger understanding of how derivatives work. I've gained a deeper understanding of key calculus concepts and how they are applied in different problems. The explanations and practice have helped me see the logic behind the material more clearly, which has improved both my comprehension and confidence in understanding calculus.
After class Professor Bu stays for a bit during groupwork, helping me try to understand what I did wrong or some key things that I did missing.
